tina@lawtk.net

Currently attending a boot camp program at Johns Hopkins to train on several different software languages. Looking to enter the Software Engineering field as I am intrigued by the prospects of a new career and finding innovative solutions with Software and Web Design.

EXPERIENCE

Johns Hopkins, Severn, MD— *Registered Nurse*

Oct.2014 - Sep 2019

- Triage incoming calls, emergent calls, and scheduling appointments
- Training of patients with Anticoagulant Therapy, Diabetes, Hypertension, and Diet
- Work with Doctors, Social Workers, and Community Organizations to help patient needs
- Maintain therapeutic medication levels; assess patient's health and treatment with positive outcomes in the Coumadin Clinic.
- Maintain communications between Doctors and Patients about health and medical outcomes.
- Maintain proper checks on equipment, keep up to date medications and discard expired, order lists of medications needed, perform tests on equipment used in the clinic.
- Work with Department staff and leaders to maintain Department functions and positive patient outcomes.
- Work with patient loads and Social Work to Outreach Patients in the community for health concerns and medical treatments, follow-up visits, and lab values.
- Work with State and Hospital personnel to maintain adequate equipment function and testing.
- Work with Epic Program to document patient outcomes and needs and interact with other State Hospitals to provide quality medical care for our patients.

Medication Policy (2005)

PROJECTS

[Online Portfolio](#) — *BootCamp Coding Exercise*

This project was one of the first that I completed in the class, and continued to upgrade as we learned new techniques and styling with HTML and Bootstrap CSS.

[Weather Board](#) — *BootCamp Coding Exercise*

This project was one of the first experiments we did with API calls.

This project was challenging at first, but once I learned the basics of the AJAX syntax and JSON format, I was able to query multiple sources for the needed weather data.

[Online Calendar](#) — *BootCamp Coding Exercise*

This project allowed me to programmatically control how the HTML would be rendered based on a data set. I also setup the UX to show past, current, and future times in the calendar and store the appointments to the local storage.
